

FATİH ERDOĞAN

İstanbul, Turkey ✉ fatih.erdgann@gmail.com ☎ +905413854028 🌐 in/fatih-erdogan

SUMMARY

4th-year Management Information Systems student ranked 1st in the department (GPA: 3.77/4.00) with hands-on experience in Android development (Kotlin) and full-stack web development (React, Node.js). Completed a software internship at Tahsilist, a fintech SaaS company specializing in receivables and collection automation, delivering production refactoring work through code-reviewed pull requests. Contributed to an international TÜBİTAK-funded project by designing and prototyping mobile interfaces within an Agile SDLC environment.

EXPERIENCE

Software Development Intern

Tahsilist Yazılım A.Ş. – Fintech SaaS

Jul 2026 - Sep 2026, İstanbul

- Worked on Tahsilist's fintech SaaS platform for receivables management and collection automation using **React** and **Node.js**, following a Git pull-request and code-review workflow.
- Refactored a ~300-line current-account component into filter, table and summary sub-components, shrinking the main component by about one third without changing behavior.
- Merged duplicated SMS, e-mail and voice-message notification functions into a single extensible service; removed dead code and centralized template-filling logic.
- Reduced unnecessary re-renders on the KPI dashboard using **React Profiler**, **useMemo** and **useCallback**, and consolidated duplicated CSS into a shared stylesheet.
- Built an end-to-end course management system (**React**, **Express**, **MongoDB**, REST API) with enrollment and installment tracking during onboarding.

Scholarship Researcher

İşık University – IntalaLAB

May 2024 - Nov 2024, İstanbul

- Contributed to the international **TÜBİTAK-supported** project "Trustable and Sustainable Open Platform for Smart Honey Value Chains (TOP4HoneyChains)".
- Actively participated in the **Software Development Life Cycle (SDLC)** by developing mobile application user interfaces (UI) and screen designs.
- Developed digital services ensuring transparency and end-to-end traceability across the honey value chain.
- Developed high-fidelity mobile prototypes used as technical evidence in international **TÜBİTAK** project reports, with screens visualizing hive data and lab test results for beekeepers and consumers (top4honeychains.isikun.edu.tr).
- Designed interface logic and user-flow diagrams to improve UX and navigation within an **Agile** team.

PROJECT

Tarihi Yarım Ada – Spice Bazaar & Historic Peninsula | HTML, CSS, JavaScript

- Overview:** 15-page site on Istanbul's Historic Peninsula and the Spice Bazaar (5-person team). Live: fatiherdogan1.github.io/tarihi-yarimada
- Key Features:** Scroll-driven 3D shop model (model-viewer + GSAP ScrollTrigger), JS review slider, scroll-reveal animations.
- Design:** Original team photography instead of stock imagery, responsive layout, pure-CSS carousel and sidebar menu.

EDUCATION

Management Information Systems (Full Scholarship)

İşık University • Şile, İstanbul • 2022 - 2027 (Expected) • 3.77 / 4.00

- 4th Year Student | **Ranked 1st in Department**

SKILLS

Mobile: Kotlin, Java, Android SDK, Android Studio, Retrofit, Room Database, Coroutines, Firebase, MVVM Architecture

Web & Backend: React, Node.js, Express.js, MongoDB, REST API, C#, .NET Framework, Microsoft SQL Server

Tools: Git, Postman

English: B2 (Strong reading & writing skills)

Problem Solving, Analytical Thinking, Teamwork & Collaboration, Fast Learner, Time Management, Research-Oriented, Innovative Thinking.
